## **Project description :**

Suraksha AI – Women Safety Alert & Guidance System is a social responsibility project that uses Artificial Intelligence to support women in unsafe or emergency situations. Many women face risks in daily life such as harassment, stalking, and unsafe travel. At such times, people often panic, and they don't know the correct steps to take. This project aims to give instant guidance and support using AI tools without any coding.

Using AI chatbot (Voiceflow + ChatGPT), a woman can type a message like "I need help" and immediately receive safety instructions, emergency helpline numbers, self-protection steps, and location-sharing guidance. Along with the chatbot, the project also includes AI-generated posters, safety quotes, and awareness videos using tools like Canva AI and Pictory AI to educate society about women's safety.

The system promotes quick response, awareness, safety education, and empowerment. It can be used in colleges, public places, schools, communities, and also has future scope for mobile apps, GPS alerts, and wearable devices. This project combines technology with social responsibility and spreads the message that every woman deserves safety, support, and respect.
